

Hello from sample.pdf!

This PDF gives the file reader more realistic content for testing.

The LLM project can search extracted PDF text for keywords.

Python appears in normal case here, and PYTHON appears again in uppercase.

The reader keyword appears more than once so search\_in\_file can return multiple matches.

A project note sits in the middle of this PDF sentence for context testing.

Final PDF line: llm, LLM, file reader, and keyword search all appear together.
